It is probable that you will not wish to change your complete installation at once, indeed you may prefer to spread your orders and cost over a period of time.

There are likely to be quite a number of different designs of lighting fittings throughout your prison and identification of the various units will be a time consuming challenge.

We will be very pleased to visit, take a walk around with your engineer, identify the different fittings and provide you with an inventory and quotation for your installation . . . free of charge. You will then be ready to start making significant energy and cost savings.

We already have a significant range of replacement gear trays for many of the fittings typically installed within prisons. Members of our team have been involved in the design, manufacture & supply of lighting to prisons over many years. This is why we are confident that the choice of Aether replacement gear trays will ensure the simplest answer to making the important change to LED lighting.

In most instances simply remove the front cover, take out the existing gear tray and replace. No wiring will usually be required. The new LED gear trays will fit in exactly the same way as the old unit.

Once completed the entire fitting will continue to have ongoing CE compliance.

Typical examples of what may well be installed within your prison:
